SOFT LANDING SYSTEM

LORRY BAG

Dimensions: L2400mm x W1650mm x H600mm (600 Type)
L2400mm x W1800 x H1200mm (1200 Type)

The Soft Landing Lorry Bag is produced principally to provide protection to operatives involved in loading or unloading vehicles, particularly on or above the load bed. It offers the potential of reducing the dangers of a fall by providing an energy absorbing area surrounding the vehicle.

- Lorry Bags are manufactured using a recycled energy absorbing fill material, thereby offering an extremely cost effective way of protecting the work force in the event of a fall.
- Lorry Bags are delivered ready to use and require no pumps/power sources of any kind and are low maintenance.
- Lorry Bags have a 3 year life expectancy and an inspection can be carried out at this point to ensure suitability for continuous use. In certain cases, repairs can be carried out on site.
- The outer casing and energy absorbing inner fill are treated with flame retardant chemicals but are not fire proof. The bag is coated to resist water and mortar adhesion which substantially enhances the durability of the product.
- The Lorry Bag has been subjected to stringent tests by the National Engineering Laboratory.
- Full installation training, certification, Risk Assessments, Method Statements and test data are all available to substantiate the product usage.
