

The UK leader in Fall Arrest Systems

A high performance, versatile solution. **Always here to support you.**

SOFT LANDING SYSTEM

There when you need it

In 2016 one in four fatal injuries were caused by falls from working at height. This remains the most common cause of workplace fatality.

Accidents also from working at height rose to 37,000, and cost on average nine and a half days pay and sick leave to staff and employers.

Forest Safety Products Ltd manufacturers of the Soft Landing System, is the UK's number one leader in passive, portable fall arrest products. These are used daily across many industries, and are the first choice for; Construction, Military and Civil Aviation, Rail, Transport Logistics, Building Maintenance and Leisure.

We work with industry and government agencies to ensure our systems innovate best safety practice and meet safeguarding standards; giving you the reassurance and peace of mind for your personnel's safety. By continually developing our extensive choice of Soft Landing Systems and offering bespoke products, our customers range from the Construction industry to the Ministry of Defence.

Over two million Soft Landing Systems sold!

Since the year 2000, we have sold over two million Soft Landing Systems by constantly meeting our customers' requirements. That's enough to cover over **600 football pitches!**

The current product range service includes:

- Training
- Inspections
- Bespoke Service
- Collection and Recycling Service

No manual filling

Lightweight

Inexpensive and quick!

'Connect and go'

Flexible use

Specialist EPS medium

Weather resistant

Flame retardant

Fully Recyclable product

Access to our trained engineers

Scheduled inspections

Reassuringly safe

Our Soft Landing System is a robust fall arrest solution, proven to reduce potential injuries by absorbing the impact from a fall working at height. Subsequently, there has never been a reported injury sustained when using our Soft Landing System.

Total Safety every time, any time

The Soft Landing System can be used where you need to protect personnel if there is a risk of falling from height. The bags are filled with a specialist EPS bead, which absorbs an impact from a fall or shock. It is an adaptable and easy to position system, and is therefore the ideal cost effective solution to replace or complement conventional safety staging. As a result, we are proud to continue to pioneer new safety advances in our Soft Landing System to keep our customers safe.

Specialist EPS material is used to effectively absorb impact from a fall.

Number 1 in the UK with the Construction Industry

Our Soft Landing System is the number one trusted product by all of the major UK construction companies, for both large and small scale house and commercial developments. Its popular and easy to use because;

1. Safety Bags are ready to use!
2. Requires no filling

Story

SOFT LANDING SYSTEM

There when you need it

Versatile, lightweight portable solutions

The Soft Landing System is popular with many markets and is relied on where human safety is the priority.

Applications: Logistics & Maintenance, Entertainment & Media, Sports & Leisure

Our Soft Landing fall arrest system is ideal where impact needs to be minimised and injury averted. Which is why use of the bags are now popular during activities where this is likely.

Activities include film production for stunts and special FX, events production and staging, outdoor and extreme sports.

**HIRE SERVICE - over 5000 Soft Landing Systems are hired each month
or enough to cover 22 football pitches a year!**

Buy & Hire

- Deliver or Collect
- Hire Federation member

Safety Record

- Solid 17 year safety record
- No Soft Landing reported injuries

Approved

- BRE Testing

Standards

- Meets all UK HSE standards & legislation
- British Standards PAS59
- Complies with Montreal protocol.
- Low FOD* risk

Training

- Installation
- Risk assessment
- Method Statement

Inspections

- Completed on site by our Inspectors

* FOD = Foreign objects and debris.

Installation

4 easy steps

1. Clear debris from work area. Check bag and filling is intact and the inspection label is not out of date.
2. Position Soft Landing Systems into place. Connect by threading the webbing through double D-ring.
3. Continue to assemble bags until the required floor area is covered.
4. If you can fit your foot in between the bags, then add more bags.

Completed installation should be checked by a competent, trained and authorised individual.

Military and Civil Aviation Maintenance

We are proud to be the contracted sole supplier of bespoke, military fall arrest applications to the UK Ministry of Defence (MoD) and Defence contractors.

The aviation Soft Landing Systems have been specifically enhanced to meet the precise requirements of the Tri Forces – Land, Air and Sea, where they have been deployed at test, operational and conflict sites both home and abroad.

For safer working at height, Aviation soft landing bags can be linked and stacked around aircraft during maintenance.

Aviation bags can be used during aircraft maintenance and training exercises.

These are also ideal for civil aviation maintenance and training requirements and are specifically produced to aviation safety standards.

Our standard bag is not suitable for this industry.
